

GitHub Enterprise

Become an open source enterprise

Transform the way your business builds software with the tools, processes, and innovation only found in open source.

Stay one step ahead

You're either building great software, or you're at risk of a competitor getting there first. Few organizations can keep up with the pace of innovation happening in open source communities. The new leaders will be the organizations that embrace open source software's (OSS) code, best practices, and talent to deliver better software, faster. In fact, recent studies show that over 90 percent of new applications contain OSS and most IT leaders plan to increase their use of OSS

Challenges

While many enterprises recognize that OSS can transform the way they build software, most are still struggling to find the right path. Becoming an open source enterprise means leveraging open source code and adopting the tools and processes the community has to offer, without compromising security.

GitHub solution

GitHub Enterprise is a modern software development platform with the version control, security, and collaboration tools to power your complete development lifecycle. As the preferred platform for thousands of businesses and open source projects, only GitHub Enterprise brings you next to the innovative code and communities you want—with the control and security your business demands.

"GitHub is a place where everyone can share code, and collaborate within an open source model."

Jay Sreedharan, SVP of Engineering,
MGM Resorts International

Features

Collaboration at scale

Plan, discuss, review, and track your projects across time zones and teams.

Community access

Explore, learn, and evolve your code and processes next to leading open source projects.

Ecosystem and automation

Create, customize, and automate workflows for your team using the industry's best tools.

Team management

Manage users and teams, set permissions, and gain insights into what's working and where you can improve.

Security and compliance

Stay aware of vulnerabilities in your code dependencies, create secure checks, and simplify reporting to improve compliance.

Benefits

Increase speed

Build on open source code, collaborate effectively, and deliver faster using your preferred tools and customized workflows.

Reduce risk

Create trust in using cloud and open source with built-in security checks, vulnerability alerts, and tighter permissions controls.

Drive innovation

Access new ideas, work next to top talent, and safely incorporate open source into your own projects.

Become an open source enterprise

Build with OSS communities

To get the most out of open source, you need to be where the action is—engaging and contributing back to the communities. GitHub is the leading developer platform with over 36 million developers and thousands of OSS projects. On GitHub you can find the open source code you need, collaborate with top talent, discover new approaches, and create a deeper understanding of the code to better utilize and adapt in your organization.

Develop an innersource culture

Open source projects have become role models for how large distributed development teams can collaborate effectively. GitHub helps you bring these collaboration principles in-house, creating an “innersource” culture where engineers build proprietary software behind the firewall using open source best practices.

Create security and trust

Enterprises employ a higher level of scrutiny when it comes to using open source software due to security and licensing concerns. GitHub helps you use and build on open source code while maintaining strict compliance standards throughout your entire development process. Tools like automated token scanning and dependency vulnerability alerts keep you up to date every step of the way—and ensure your team can do their best work knowing their code is secure.

Deployment Choices

Enterprise Cloud

Scale your development team next to the open source projects you use. Modernize your DevOps processes, and develop cloud apps where they live.

- ✓ SAML integration
- ✓ 24/5 support with 8-hour response
- ✓ 99.95 percent uptime SLA

GitHub Connect

Unify your Enterprise Cloud and Enterprise Server experiences to create the hybrid deployment your team needs.

- ✓ Simplified user and account admin
- ✓ Unified search across orgs
- ✓ Unified developer contributions

Enterprise Server

Increase flexibility and control by self-hosting GitHub in your own environment or on Amazon Web Services, Azure, or Google Cloud Platform.

- ✓ SAML, LDAP, and CAS
- ✓ 24/7 support for urgent issues
- ✓ Scales > 10,000 users
